

Turning Booking Data Into Demand, Retention & Revenue

CASE STUDY

Ghana Adventures

Prepared by Xorse Adjo | Data Analyst

How can we use data to predict demand, improve tour bookings, and increase repeat customers?

PROBLEM

Inconsistent bookings

Some seasons fully booked, others slow

Low repeat customers

Most tourists book once and don't return

Underperforming packages

A few tours dominate; a long tail barely sells

HOW WE GOT HERE

Cleaned & structured 249 bookings

Standardised dates, fixed 25 missing/placeholder entries across price, season & channel fields

Modelled for Power BI

Structured the cleaned set as relational tables (bookings, customers, packages) ready to load into a database and connect to Power BI

Visualized Data and Analysed patterns

Seasonality, package performance, repeat-customer economics and channel mix

FINDING 01 — DEMAND PATTERN

Demand Is Predictable, Not Random

PEAK

~29 bookings/month avg — nearly 3x the slow-season rate (GHS 696 avg/booking)

Jan – Jun

Aug – Nov

As few as 8-11 bookings/month — the clearest gap to close (GHS 594 avg/booking)

A Handful of Tours Carry the Business

Safari Experience

GHS 18,150 revenue from just 13 bookings — highest price (GHS 1,500) and the clear candidate to expand.

The Long Tail Problem

50 of 73 listed packages (68%) sold just ONE booking each — mostly one-off, occasion-named tours (Valentine's, Year-End Cruise). They fragment marketing spend without building repeatable demand.

FINDING 03 — DESTINATION MIX

One Destination Outshines the Rest

TOP DESTINATION

Mole National Park

More than 2x the next-best destination — a single site anchors demand more than any one package does.

Packages Look Flat — Destinations Don't

Marketing Implication

Reallocate marketing spend toward top destinations like Mole National Park and Cape Coast before spreading budget evenly across the long tail of one-off, occasion-named listings.

Customer Data: The Numbers, and the Plan

1 What the Data Shows

- 37% of bookings are repeat customers (92 of 249)
- Private Tour bookings return 71% of the time vs 26% (Individual) and 13% (Group Tour)

2 Grow Off-Season Bookings

- Run 15-20% off promos via Website & Travel Agency, the top-spending channels
- Bundle slow months with corporate/group travel to fill capacity

Retarget past Peak-season guests by email 60-90 days before the slow window opens

Launch targeted off-season promos (15-20% off) via Website & Travel Agency — the highest-spend channels

RECOMMENDATIONS

Fill the Gap, Focus the Portfolio

Rebalance the Tour Line-up

Expand: Safari Experience, Volta Adventure — premium price, consistent demand

Adjust: consolidate one-off occasion tours (Valentine's, Year-End) into 4-5 seasonal campaigns instead of 20+ standalone listings

Discontinue or merge listings with a single booking in 18 months and no repeat interest

Turn First-Timers Into Repeat Guests

3

Build a Loyalty Loop

- Introduce a simple punch-card / points scheme: 3rd booking earns a discount or free add-on
- Follow up every first-time guest within 2 weeks with a personalised thank-you and next-trip offer
- Prioritise Website & Travel Agency guests for loyalty outreach — they already spend the most

Upsell first-timers into Private Tours — the 71%-return segment

4

Price & Promote With Data

- Tiered pricing: hold or raise prices on Peak, high-demand tours; discount only in proven slow months
- Add a premium Private Tour option to top packages — Private Tours already earn GHS 779 avg vs GHS 437 for Individual bookings
- Track results in Power BI dashboards (bookings, revenue, repeat rate by month) to test and refine monthly

A photograph of three young Black women sitting in a wooden canoe on a body of water. They are all smiling and holding long wooden paddles. The woman on the left is wearing a patterned dress, the woman in the middle is wearing a yellow tank top and patterned shorts, and the woman on the right is wearing a blue patterned dress. The background shows a lush green hillside with some buildings, suggesting a tropical or coastal location. The water is calm with gentle ripples.

THANK YOU

Data turns Ghana Adventures'
next booking into a predictable one.
